Title:           "Modular Stand Bag for Golf Clubs"

### Abstract

These inventions provide for golf bags, in particular stand type golf bags used in game play are arranged with modular components. These components can be easily switched by a golfer whereby the component may be replace with one having an alternative function or style. In addition, components subject to damage may be quickly and easily replaced with new components. Golf bags are configured with special fasteners which allow parts to be removably affixed to the bag for the switchable components. Standard materials and fasteners might be used elsewhere on the bag. Golf bag components which are arranged to be changeable include at least: the stand element, a back pad, shoulder straps and shoulder moulds, and pockets. Kits comprising an upgrade theme are also arranged to cooperate with these bags and to be sold as stand alone products in support of extended uses of the bags.
